ASX Release (ASX code: "FYI")

## Additional uranium anomalies located at the Yarlarweelor Project in Western Australia

Additional uranium targets have been defined at the Yarlarweelor project by surface spectrometer readings, including :

- **463 ppm U<sub>3</sub>O<sub>8</sub>** , from **Anomaly 9**
- **182 ppm U<sub>3</sub>O<sub>8</sub>** , from **Anomaly 5**,
- **178 ppm U<sub>3</sub>O<sub>8</sub>** , from **Anomaly 6**, and
- **176 ppm U<sub>3</sub>O<sub>8</sub>** at **Anomaly 16**

Following on from its initial success in locating new uranium drill targets at it's Yarlarweelor project as reported to the Australian Stock Exchange (ASX), 6 July 2010, FYI Resources Ltd has now located another four areas on E52/2095 reporting anomalous uranium spectrometer readings. None of these new areas have been drill tested in the past.

**Anomaly 9** is an area of fresh granite outcrop 3m by 3m which gave spectrometer readings up to **463 ppm U<sub>3</sub>O<sub>8</sub>**.

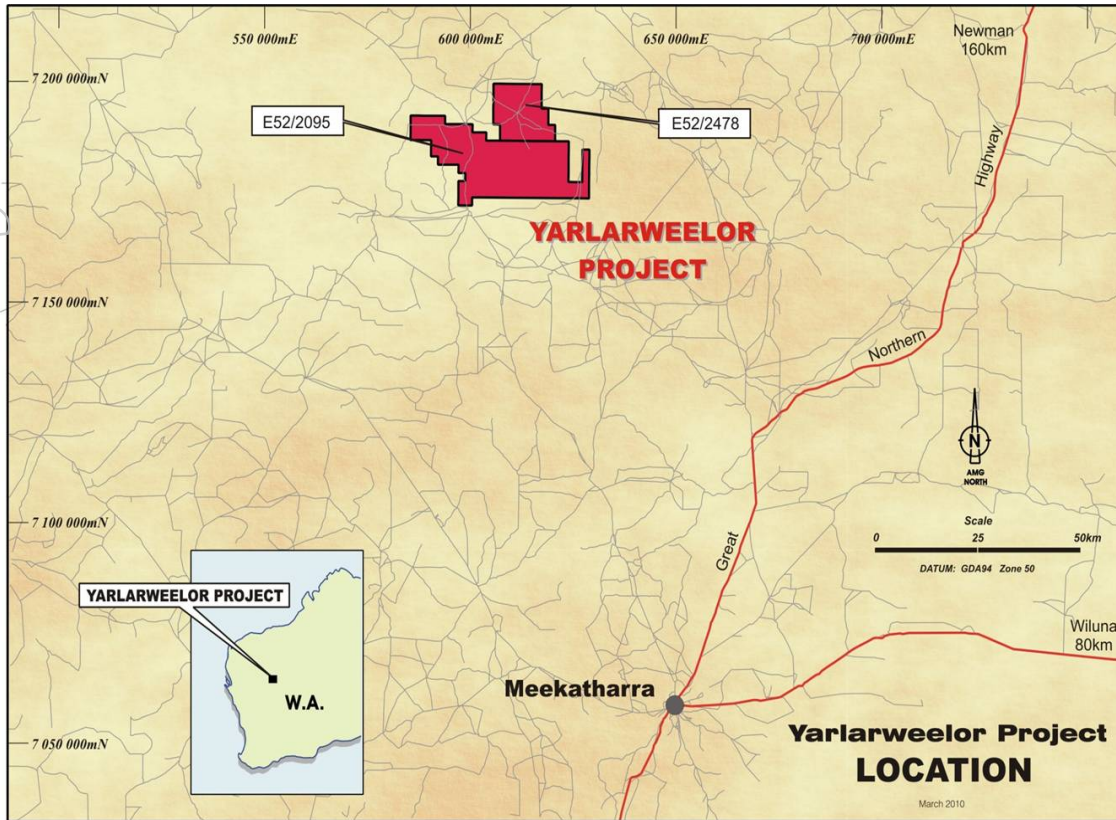

**Anomaly 5** is an area of weathered granite outcrop 10m by 2m which gave spectrometer readings up to **182 ppm U<sub>3</sub>O<sub>8</sub>**.

**Anomaly 6** is located in a banded ferruginous rock 40m long by 2m wide which gave spectrometer readings up to **178 ppm U<sub>3</sub>O<sub>8</sub>**, and

**Anomaly 16** is an area of fresh granite outcrop 5m by 2m which gave spectrometer readings up to **176 ppm U<sub>3</sub>O<sub>8</sub>**.

A previous detailed airborne radiometric survey over the eastern half of E52/2095 outlined 95 uranium anomalies requiring follow up ground checking. To date, 30 of these anomalies have been visited, nine of which had results reported to the ASX. The remaining 21 anomalies reported spectrometer readings <100 ppm U<sub>3</sub>O<sub>8</sub> and are not considered significant at this time.

The program of ground checking airborne radiometric anomalies will continue during the current September quarter with the aim of adding further uranium drill targets.

- End -

*The information in this report that relates to Exploration Results has been compiled by Mr. David Ross B.Sc(Hons), M.Sc. who is an employee of Empire resources Ltd. He is a member of the Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. He has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity to which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". David Ross consents to the inclusion in the public release of the matters based on his information in the form and context in which it appears.*

*Uranium spectrometer readings were taken with a calibrated Exploranium GR-135.*
