Empire Resources to commence drilling at its Yuinmery Project, Western Australia

Empire Resources Ltd (ASX: ERL) will commence a 16-hole RC drill programme at its Yuinmery copper-gold project in Western Australia later this week. Empire is targeting copper-gold volcanogenic massive sulphide (VMS) mineralization, similar in style to Golden Grove type orebodies.

The Yuinmery Project is located 475km northeast of Perth within the Youanmi Greenstone Belt, which forms part of the Archean Yilgarn Craton. The Company holds a 9.2km² block of tenements 6km east of the Youanmi Gold Mine. The region is considered highly prospective for VMS style base metal mineralization and lode gold deposits.

The 16-hole programme is targeting a number of recently outlined strong EM conductors and magnetic anomalies, as well as significant intersections of copper, gold and zinc made by previous explorers. Past results include:

- | | |
|---|--|
| <ul style="list-style-type: none">• 8m @ 1.19% Cu• 1.55m @ 1.8%Cu• 1.79m @ 6.8%Cu• 3.07m @ 3.09%Cu | <ul style="list-style-type: none">• 25.81m @ 0.97%Cu• 10m @ 0.48%Zn• 14.0g/tAu |
|---|--|

Empire has been working towards developing possible revenue streams from its existing projects this year. The Penny's Find gold project near Kalgoorlie has delivered encouraging drill results. The Yuinmery copper-gold project near Golden Grove is also a key focus project to develop a cash flow. This new drill programme will be an important step forward for Empire.

Empire Resources is currently focused on exploring for precious metals, copper and uranium. Empire Resources' assets includes a tenement package covering 2112 km² in some of Western and South Australia's most prospective mineral provinces – both established and emerging. The Board and senior management have extensive experience in resources exploration and project development. Empire Resources listed on the ASX (ASX: ERL) in February 2007.
