

YARLARWHEELOR URANIUM PROJECT COMMENCEMENT OF DRILLING PROGRAM

Perth, Australia. 24 March 2010: Empire Resources Limited, the current owner of E52/2095 (the Yarlarweelor Uranium Project), has informed Freedom Eye Limited that a drilling program at the Yarlarweelor Uranium Project is expected to commence on 2 April 2010.

Previous drilling on E52/2095 undertaken in the late 1970's and early 1980's demonstrated uranium mineralisation is open along strike and at depth in three zones within E52/2095. Grades identified by this previous drilling activity were up to 21 metres @ 404ppm U₃O₈ from 143m downhole including 8 metres at 708ppm U₃O₈. Details of the previous drilling are reported in the Freedom Eye Limited Prospectus dated 27 November 2009.

The diamond core drilling program scheduled to commence on 2 April 2010 is designed to confirm the uranium mineralisation located in the previously drilled percussion holes, with a further drilling program planned for the June quarter to further test known occurrences as well as more recently identified radiometric anomalies within the tenement.

The Yarlarweelor Uranium project is currently the subject of a transaction between Empire Resources Limited and Freedom Eye Limited, whereby Freedom Eye Limited is acquiring the project. The terms and conditions of this transaction are detailed in the Freedom Eye Limited Prospectus dated 27 November 2009 and Supplementary Prospectus dated 26 February 2010, which can be downloaded from the Freedom Eye Limited website (freedomeye.com.au).
