ASX Release

27 June 2008

Further High Grade Copper-Gold Intersections from new drilling at the Yuinmery Project in WA

Further high grade copper-gold intersections are announced by Empire Resources Ltd (ASX “ERL”) from new drilling on its Yuinmery Project, 85 kilometres southwest of Sandstone in Western Australia.

The 2,446 metre program of 16 Reverse Circulation holes tested two sulphide bearing horizons known as the Upper and Lower Zones, at the Just Desserts Prospect towards the western boundary of the Yuinmery tenement area.

Assay results from the Just Desserts program included best intersections of :

<u>Hole No.</u>	<u>Intersection</u>	<u>Sulphide Zone</u>
YRC08-19	2m @ 2.02%Cu, 0.18g/tAu from 263m	Lower
YRC08-21	8m @ 2.95%Cu, 3.20g/tAu from 119m includes 4m @ 4.79%Cu, 3.12g/tAu from 120m	Upper
YRC08-27	15m @ 1.37%Cu, 0.24g/tAu from 44m	Upper
YRC08-28	10m @ 1.55%Cu, 1.48g/tAu from 76m 5m @ 3.12%Cu, 0.28g/tAu from 106m	Upper Lower
YRC08-30	9m @ 2.20%Cu, 0.29g/tAu from 133m includes 4m @ 3.54%Cu, 0.24g/tAu from 135m	Lower
YRC08-31	10m @ 4.23%Cu, 6.01g/tAu from 123m includes 4m @ 8.62%Cu, 14.08g/tAu from 124m	Lower

For personal use only

Empire Resources is evaluating a number of volcanogenic massive sulphide (VMS) style copper-gold occurrences within its Yuinmery acreage and other project areas.

The May RC campaign tested the two zones at depth beneath previously obtained high grade copper-gold intersections as well as testing shallow oxidised mineralisation.

The drilling results revealed both zones of sulphide mineralisation dipping about 60 degrees to the northeast and plunging 45 degrees to the southeast. Both zones have a strike length of 150m and a down plunge extent of at least 250m. They remain open down plunge to the southeast. The two zones also appear to be merging at depth to form one horizon of about 12 metres true width.

Diamond drilling is being planned to test the down plunge extensions to both sulphide zones as well as undertaking an initial resource calculation.

The information in this report that relates to Exploration Results has been compiled by Mr. David Ross B.Sc(Hons), M.Sc. who is an employee of the Company. He is a member of the Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists. He has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity to which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the “Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves”. David Ross consents to the inclusion in the public release of the matters based on his information in the form and context in which it appears.

NSA : no 1m assays above 0.5%Cu

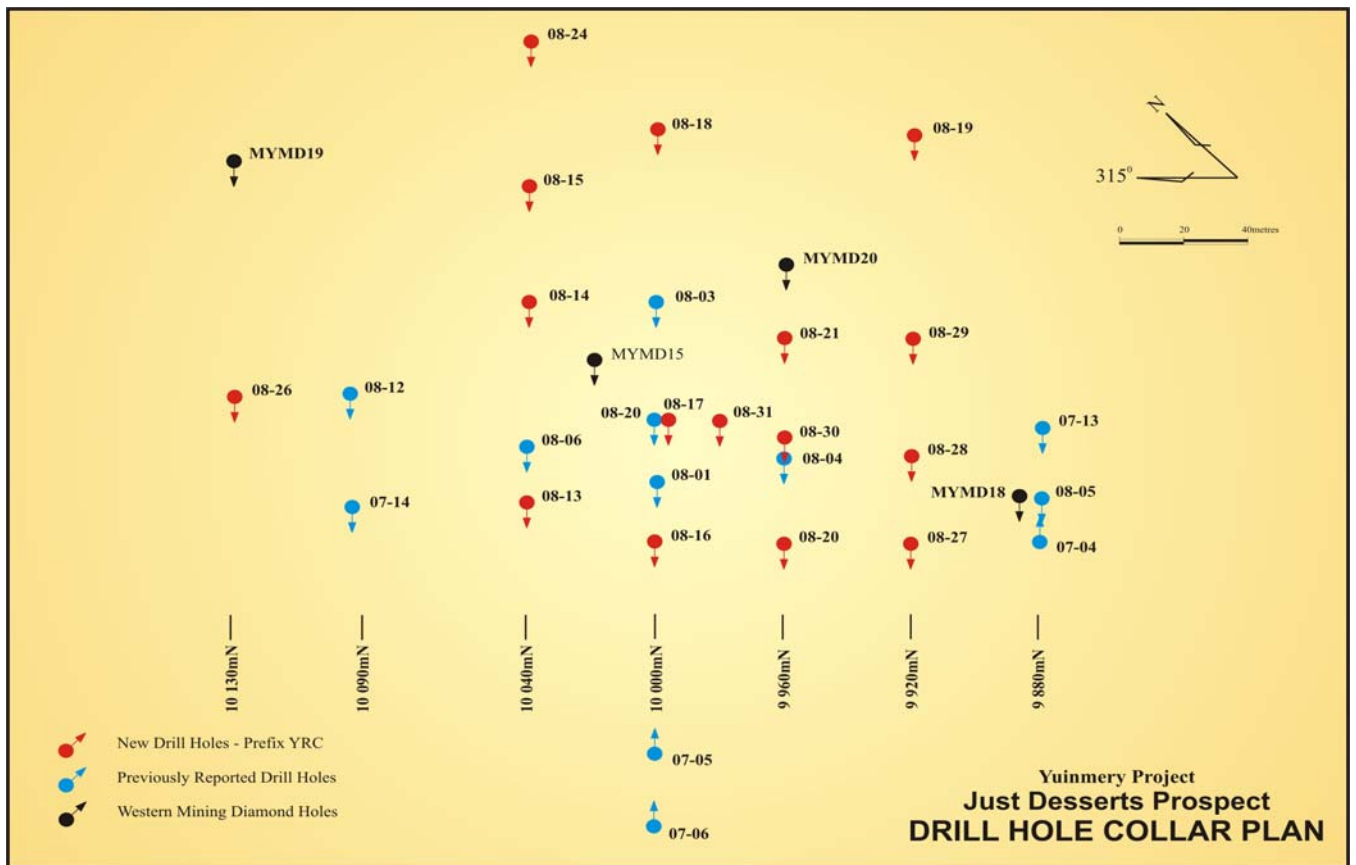

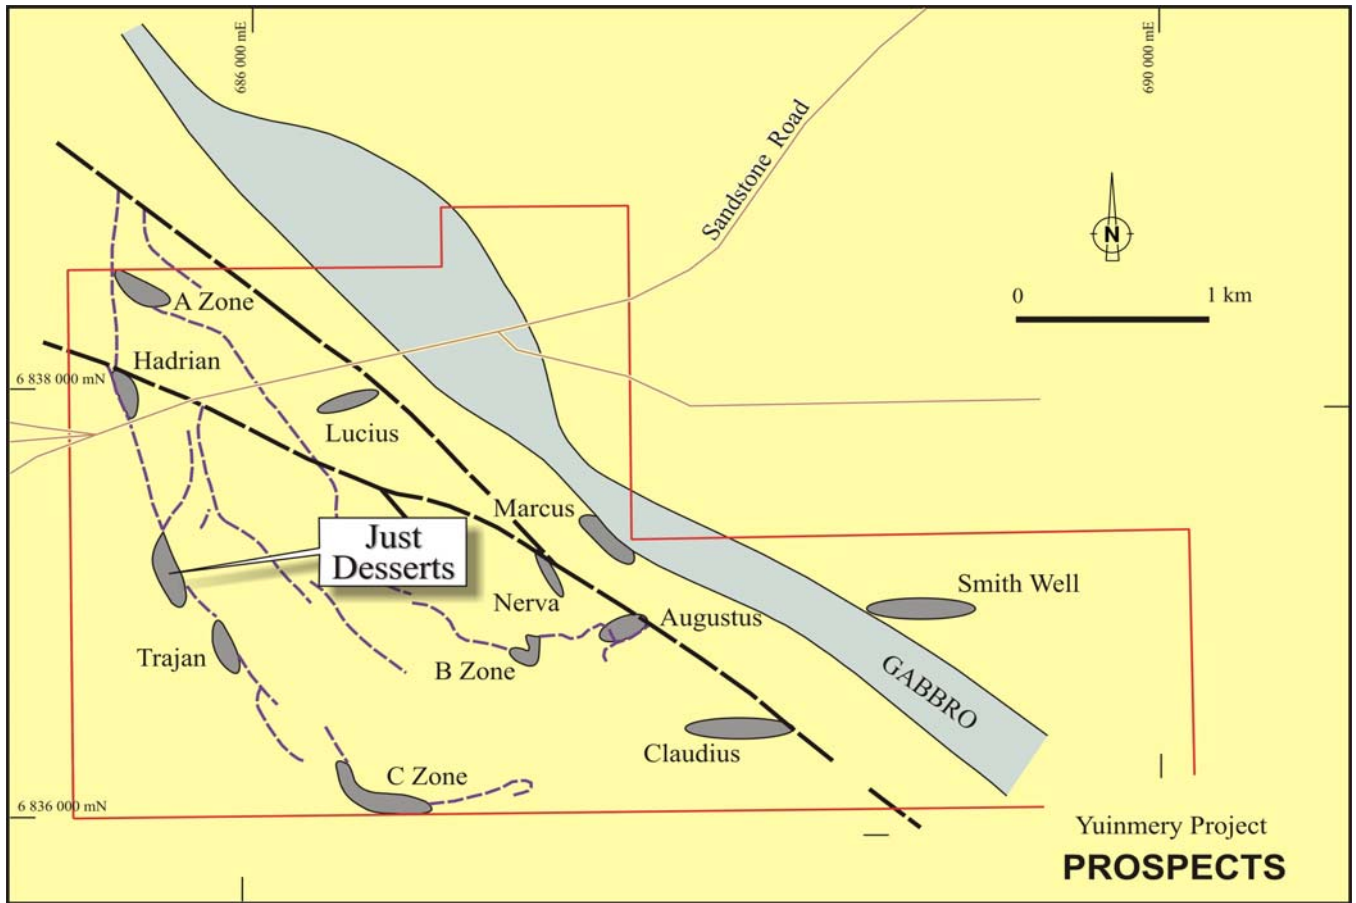

Intersections are an arithmetic average calculated using a 0.5%Cu or 1.0g/tAu lower cut-off. No high cut has been applied.

Maximum internal dilution within an intersection is 2m @ less than 0.5%Cu

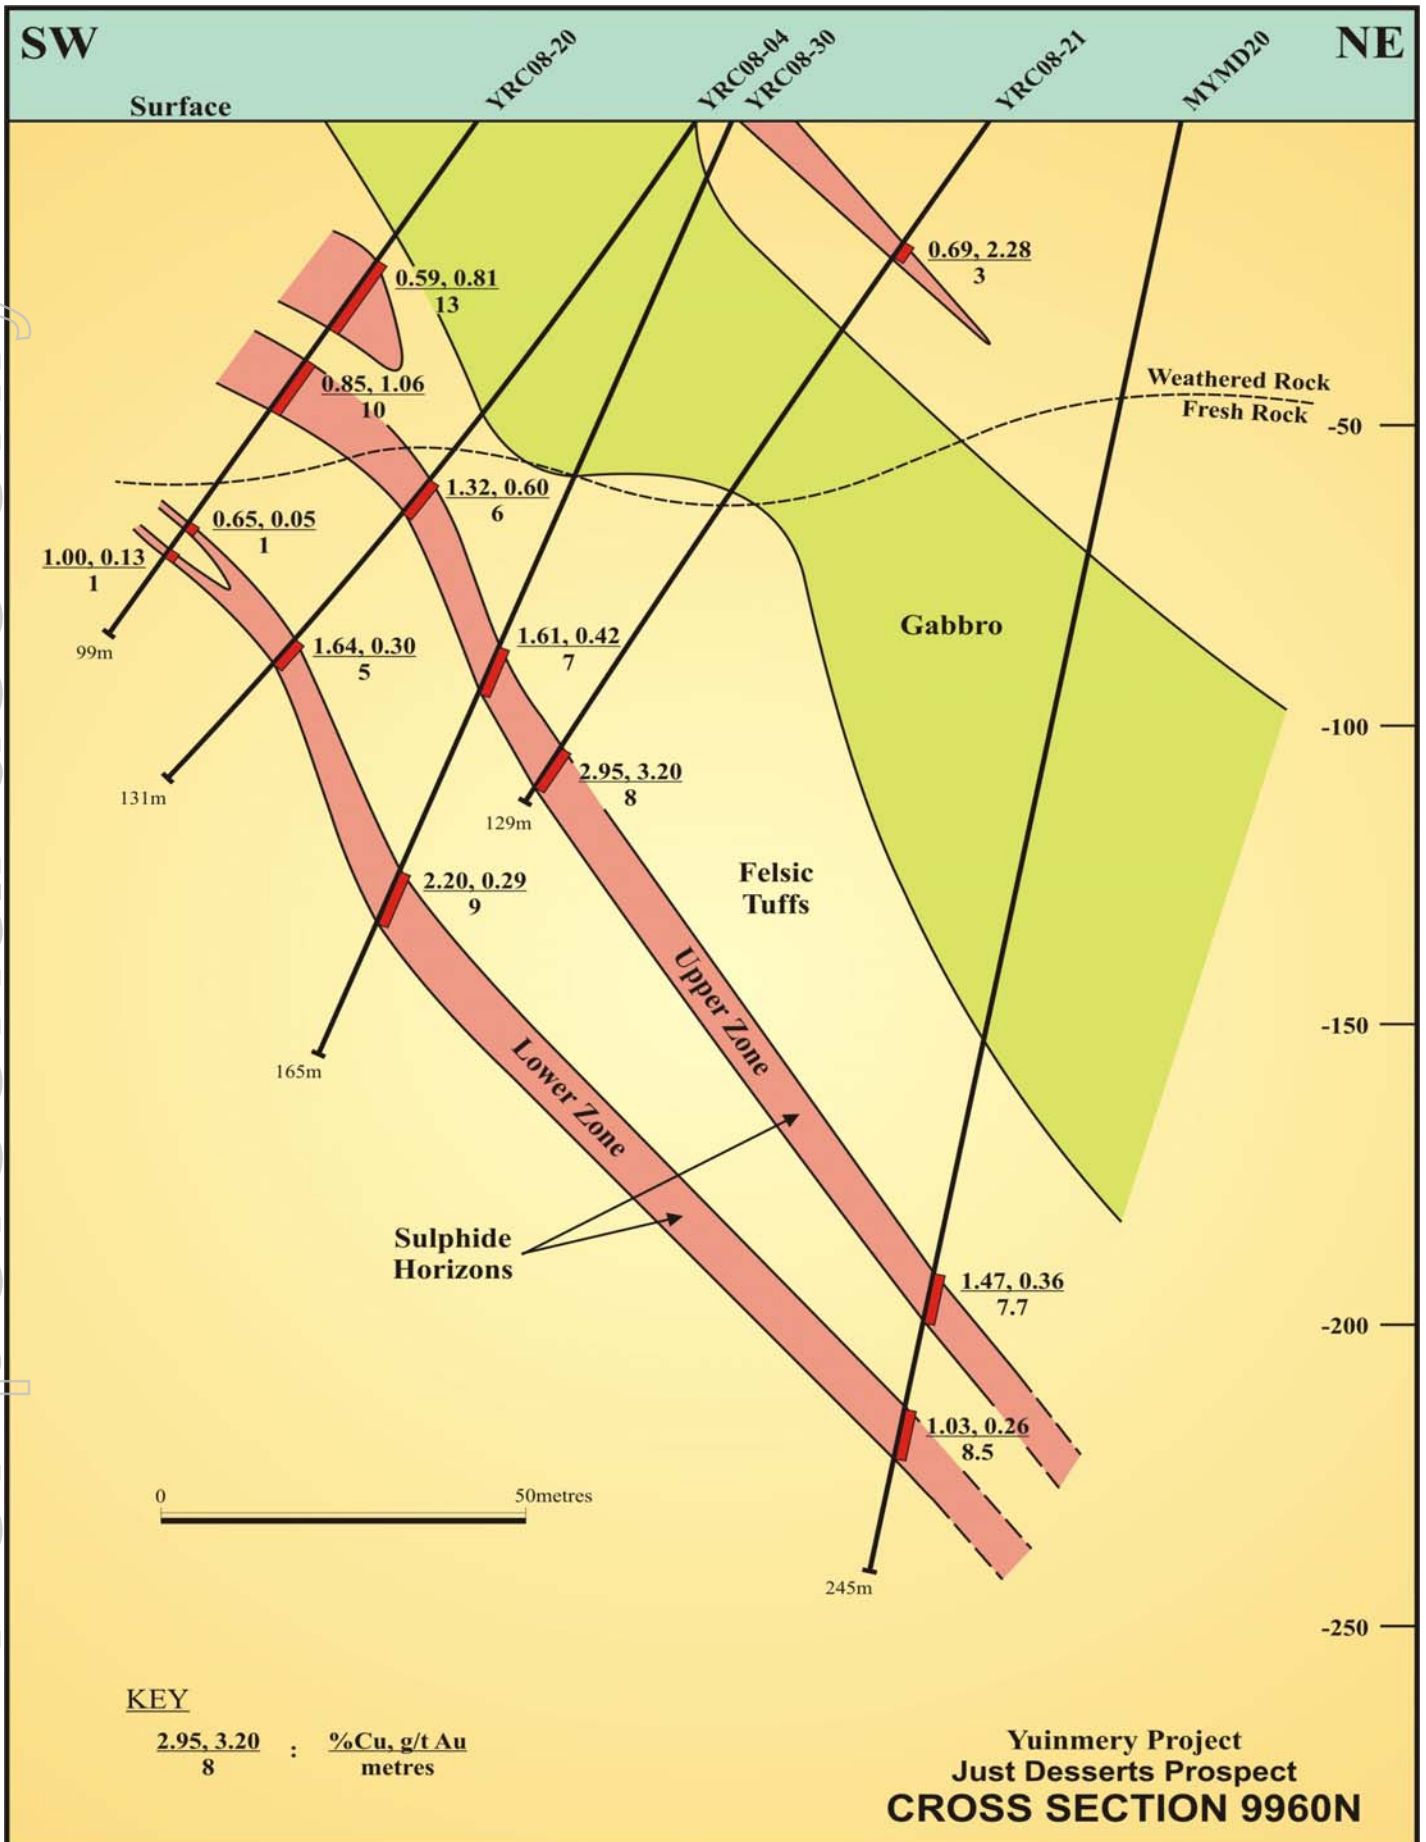

Assays were done on 1 metre split samples using a 40gm Fire Assay for gold and mixed acid digest and ICP Optical Emission Spectrometry for copper.

Coordinates GDA94 zone 50
